                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            NOTE: This record contains 76 individual sequencing reads that have not been assembled into contigs. Runs of N are used to separate the reads and the order in which they appear is completely arbitrary. Low-pass sequence sampling is useful for identifying clones that may be gene-rich and allows
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Contact: sequence_submissions@genome.wi.mit.edu

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    NOTE: Estimated insert size may differ from sequence length (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html).
NOTE: This is a 'working draft' sequence. It currently consists of 32 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                       Worley,K.C.
Direct Submission
Submitted (29-JAN-2000) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA
On Oct 14, 2001 this sequence version replaced gi:11079355.

* NOTE: This is a 'working draft' sequence. It currently

* consists of 48 contigs. The true order of the pieces

* is not known and their order in this sequence record is

* arbitrary. Gaps between the contigs are represented as

* trus of N, but the exact sizes of the gaps are unknown.

* This record will be updated with the finished sequence

* as soon as it is available and the accession number will

* be preserved.

On Nov 30, 2001 this sequence version replaced gillfoots.

On Nov 30, 2001 this sequence version replaced gillfoots.

On Nov 30, 2001 this sequence version replaced gillfoots.

Where differences are found these are annotated as variations where differences are found these are annotated as variations where differences are found these are annotated as variations wereation annotation may not be found in the sequence submission corresponding to the overlapping clone, as we submit sequences with conficient as described above.

This sequence was finished as follows unless otherwise noted: all regions were either double-etranded or sequenced with an alternate regions were either double-etranded or sequencing problems, such as compressions and repeats; all regions were covered by at least one plasmid subclone or more than one M13 subclone; and the one plasmid subclone or more than one M13 subclone; and the one plasmid subclone or more than one M13 subclone; and the sastembly was confirmed by restriction dispet. The following assembly was confirmed by restriction dispet. The following subscending are used to associate primary accession numbers given in the feature table with their source databases: Em:, EMBL; Sw:, in the feature table with their source databases: Em:, EMBL; Sw:, http://www.sander.or.uk/Droiects/C elecans/wormper RP23-35061 is

gene encoding an antigen of Epstein-Barr virus (EBV). The human cell line, compositions and methods are useful for inducing or stimulating an immune response in a human to an EBV-associated cancer, where the human has or is at risk for Hodgkin's lymphoma, nasopharyngeal carcinoma, gastric carcinoma, Burkitt's lymphoma, T-cell lymphoma, B-cell lymphoma, parotid carcinoma, breast carcinoma, and leiomyosarcoma. The present sequence represents a nucleotide sequence associated with the cell line
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Testing candidate drug for treating age-related macular degeneration, administering drug to Cc12-deficient, Ccr2-deficient knockout mouse, a malyzing development or regression of drusen and/or lipofuscin accumulation in eye.

               This invention relates to a novel methods and animal models for testing candidate drugs that can be used for the treatment or prevention of agerelated macular degeneration (AMD). Specifically, it refers to administering a candidate drug to gene knockout mice, in particular CC12-deficient, CCr2-deficient and/ or a Cc12-deficient/Ccr2-deficient dual knockout mouse. The present invention describes analysing the knockout mouse eye for development or regression of drusen and/ or lipofuscin accumulation, as well as for the effect of a candidate drug on Bruch's membrane, retinal degeneration and/ or choroidal neovascularisation. Accordingly, such compositions exhibit ophthalmological activities and can be used for gene therapy purposes. This polymucleotide sequence is the human Cc12 promoter region DNA of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                  120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            180

                                                                                                                                                                                                         This invention relates to a novel methods and animal models for testing candidate drugs that can be used for the treatment or prevention of agerelated macular degeneration (AMD). Specifically, it refers to administering a candidate drug to gene knockout mice, in particular Ccl2-deficient, Ccr2-deficient and/ or a Ccl2-deficient/Ccr2-deficient dual knockout mouse. The present invention describes analysing the knockout mouse eye for development or regression of drusen and/ or lipofuscin accumulation, as well as for the effect of a candidate drug on Bruch's membrane, retinal degeneration and/ or choroidal neovascularisation. Accordingly, such compositions exhibit ophthalmological activities and can be used for gene therapy purposes. This polynucleotide sequence is the human Ccl2 gene and enchancer region DNA of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       antiarteriosclerotic; antianaemic; cytostatic; nootropic;

                                                                                                                                                                                                                                                                                                                                                                      of human immune system associated
                                                                                                                                                                                                                                                                                                                                                                The present invention provides a number of human immune system associate genes which are modified by the methylation of cytosines. The sequences can be used in the diagnosis and treatment of immune system disorders, including eye diseases such as retinopathy, neovascular glaucoma and macular degeneration, arteriosclerosis, anaemia, cancer, acute myeloid leukaemia, Alzheimer's disease, AIDS, epilepsy, neurofibromatosis, rheumatoid arthritis, psoriasis and inflammatory/ulcerative bowel diseases. The present sequence is a gene of the invention

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ö
                                                                                                                                                                                                                                                                                  The present invention provides a number of human immune system associated genes which are modified by the methylation of cytosines. The sequences can be used in the diagnosis and treatment of immune system disorders, including eye diseases such as retinopathy, neovascular glaucoma and macular degeneration, arteriosclerosis, anaemia, cancer, acute myeloid leukaemia, Alzheimer's disease, AIDS, epilepsy, neurofibromatosis, rheumatoid arthritis, psoriasis and inflammatory/ulcerative bowel diseases. The present sequence is a gene of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         120

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ઠે
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                셤
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present invention relates to novel DNA and protein sequences which are associated with carcinomas. The sequences are useful for: (1) for screening drug candidates; (11) for screening of bioactive agent capable of bioactive agent capable of bioactive agent capable of modulating the activity of CAP; (11) for screening of a bioactive agent capable of modulating the activity of CAP; (11) for diagnosing carcinoma; (vi) for inhibiting the activity of CAP; (vi) for tasting carcinoma; (vii) for neutralizing the effect of CAP; (vii) for treating carcinoma; (viii) for neutralizing the effect of CAP; (ix) as a biochip; (x) for diagnosing carcinoma or a propensity to carcinoma; and (xi) for determining Carcinoma are appensity to carcinoma; and (xi) for determining Carcinoma Associated (CA) gene copy number. In addition, the CA genes are useful as DNA vaccines and the CAP are useful as markers of carcinoma including lymphoma. The present sequence is one such CA coding sequence. Note: This patent is an equivalent to basic patent

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     MOOR,
       The invention relates to novel mucleic acids encoding novel human foetal antigens. The nucleic acids and proteins are used to prevent, treat (e.g. by gene therapy) or ameliozate a medical condition in e.g. humans, mice, rabbits, goats, horses, cats, dogs, chickens or sheep. They are also used in diagnosing a pathological condition or susceptibility to a condition. The antibodies to the antigens can also be used in alleviating symptoms associated with the disorders and in diagnostic immunosasays e.g. radioimmunosasays or enzyme linked immunosorbent assays (ELISA). Disorders which are diagnosed or treated include autoimmune considers e.g. rheumatoid arthritis, hypoproliferative disorders e.g. cardioral sames of the breast or liver, cardiovascular disorders e.g. cardiovascular disorders e.g. cardiovascular disorders e.g. cardiovascular disorders e.g. cardiovascular disorders e.g. cardiovascular disorders e.g. cardiovascular disorders e.g. cardiovascular disorders e.g. pacteria, viruses and fungi and ocular disorders e.g. corneal infection.

The polypetides can also be used to aid wound healing and epithelial coll proliferation, to prevent skin aging due to sumburn, to maintain corgans before transplantation, for supporting cell culture of primary crisques, to regenerate tissues and in chemotaxis. The polypetides can also be used as a food additive or preservative to increase or decrease corgans before transplantation, for supporting cell culture of primary crisques, to regenerate tissues and in chemotaxis. The polypetides can also be used as a food additive or preservative to increase or decrease corgans before transplantation, for supporting cell culture of primary also be used as a food additive or preservative to increase or decrease corgans are given in the specification. The present sequence is a composition of the printed specification, but was obtained in electronic format directly
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      7072 CTCTAATATACATTTAAAATTTTTCACAATAAAAATTTAAAAATTTTGCCTTGGATCTTT 7013

                                                                                                                                                                                                      The invention describes novel human secreted proteins and the nucleotides concoding them. The polynucleotides are useful in chromosome identification, for radiation hybrid mapping, in controlling gene capression, in gene therapy or as molecular weight markers. The expression, in gene therapy or as molecular weight markers. The colynucleotides and polypeptides are useful for diagnosing, treating or preventing diseases of the immune system, immunodeficienties, e.g. preventing diseases of the immune system, immunodeficienties, e.g. crythematosus, rheumatoid arthritis, multiple sclerosis, haemolytic crythematosus, rheumatoid arthritis, multiple sclerosis, haemolytic crythematory conditions, e.g. inflammatory bowel disease. They can also inflammatory conditions, e.g. inflammatory bowel disease. They can also cryator of T cells. The polynucleotides and polypeptides are also activator of T cells. The polynucleotides and polypeptides are also cuseful for treating or preventing blood-related disorders, e.g. useful for treating or preventing blood-related disorders, e.g. cosinophila, thrombosis, thrombosmbolism, atherosclerosis, myocardial creating, preventing or diagnosing hyperproliferative disorders conforming treating, preventing or diagnosing hyperproliferative disorders can also be used for infarction, unstable angina or anemia. They can also be used for infarction, unstable angina or anemia. They can also be used for infarction, unstable angina or anemia or anemia the disorders can observe the disorders can be or respiratory acidosis or kidney stones), cardiovascular disorders or respiratory acidosis or kidney stones), cardiovascular disorders or respiratory acidosis or kidney stones), cardiovascular disorders or respiratory collaporders. The sequence represents a novel human secreted protein to polynucleotide fragment. Office at the sequence is available in electronic format from the US patent office at

The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed crivity of (II) as useful in gene therapy techniques to restore normal activity of (II) so to treat disease states involving (II). (II) is useful in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polynucleotide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations diagnostics, forensics and products dependent on DNA and am to produce other types of data and products dependent on DNA and amino acid sequences has sets terminal diagnostic contact the second of the contact of the contact of the contact of the contact of the contact of the contact of the contact of the contact of the contact of the contact of the contact of the contact of the contact of the contact of the contact of the contact of the contact of the contact of the contact of the contact of the contact of the contact of the contact of the contact of the contact of the contact of the contact of the contact of the contact of the contact of the contact of the contact of the contact of the contact of the contact of the contact of the contact of the contact of the contact of the contact of the contact of the contact of the contact of the contact of the contact of the contact of the contact of the contact of the contact of the contact of the contact of the contact of the contact of the contact of the contact of the contact of the contact of the contact of the contact of the contact of the contact of the contact of the contact of the contact 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   65 CATGCCTCAAGTACTCCTATCATATTTGTAAGAGAACAACAGTTCACTGAAATGAATTCTA 124

                                                                         셤
                               8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Importation of Mark Resource (http://www.jax.org/resources/documents/dnares/). The DNA was hydrodynamically sheared by repeated passage through a 0.005 inch orifice at constant velocity. The sheared DNA was blunt end-repaired with T4 DNA polymerase and T4 polymerase and T4 polymerase and T4 polymerase and T4 polymerase and T4 polymerase and T4 polymerase and T4 polymerase and T4 polymerase and T4 polymerase and T4 polymerase and T4 polymerase and T4 polymerase and T4 polymerase and T4 polymerase and T4 polymerase and T4 polymerase and T4 polymerase and T4 polymerase and T4 polymerase and T4 polymerase and T4 polymerase and T4 polymerase and T4 polymerase and T4 polymerase and T4 polymerase and T4 polymerase and T6.5 kp range using preparative agarose gel electrophoresis. Vector DNA was prepared from a derivative of pWD42 (gi|4732114|gb|AF129072.1), a copy-number inducable derivative of plasmid R1. The vector was ligated with adaptors complementary to the insert adaptors and purified. The sheared, adaptored mouse DNA was annealed to adaptored vector DNA, and transformed into chemically-competent E. coli XL10-Gold (Stratagene) cells and selected for ampicillin resistance."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ö
